Frontend UI Specifications & Page Blueprints

This document outlines the exact user interface requirements, form fields, and data connections for every page in the nextBooq platform, divided into the three core domains.

PART 1: The Control Plane (www.nextbooq.com)

This section handles marketing, authentication, and onboarding.

1. Registration & Login (`/auth/register` & `/auth/login`)

- **Purpose:** Global identity creation and authentication.
- **UI Elements:** Centered card layout, platform branding.
- **Register Form Fields:**
  - `Name` (Text Input, required)
  - `Email` (Email Input, required)
  - `Phone` (Tel Input, required)
  - `Password` (Password Input, required, min 8 chars)
  - *Submit Action:* Calls `useRegister` hook -> Redirects to `/onboarding` .
- **Login Form Fields:**
  - `Email` (Email Input, required)
  - `Password` (Password Input, required)
  - *Submit Action:* Calls `useLogin` hook -> Decodes JWT -> Routes to `[tenant]/dashboard` if Owner/Manager, or back to booking page if Customer.

2. The Onboarding Wizard (`/onboarding`)

- **Purpose:** Provision a new tenant (Organization + Cafe).
- **UI Elements:** Top progress bar (Step 1 of 3), Zustand state to hold form data between steps.
- **Step 1: Organization & Cafe Profile**
  - `Organization Name` (Text Input - e.g., "Artisan Coffee Co.")
  - `Cafe Name` (Text Input - e.g., "Artisan Coffee Indiranagar")
  - `Timezone` (Searchable Dropdown - e.g., "Asia/Kolkata")
- **Step 2: URL Configuration**
  - `Slug` (Text Input - e.g., "artisan-indiranagar").
  - *UI Feature:* Real-time debounced check showing a green checkmark if the slug is available. Displays preview: `artisan-indiranagar.nextbooq.com` .
- **Step 3: Billing & Provision**
  - *UI Elements:* Pricing tier selection cards (e.g., Free Trial vs Pro).
  - *Submit Action:* Submits the entire Zustand payload to `useCreateCafe` (`POST /api/v1/cafes`). Triggers Razorpay subscription setup. Redirects to new dashboard.

PART 2: The Customer Booking Flow (cafe.nextbooq.com)

This is the public-facing widget. It heavily utilizes React Query for live availability.

1. Main Booking Wizard (`/[tenant]`)

- **Purpose:** Search for and select a table.
- **Initial Load:** Server Component fetches `GET /cafes/slug/:slug` to inject the cafe's specific logo, brand colors, and `reservation_rules` .
- **Step 1: Criteria Selection (The Filter)**
  - `Party Size` (Dropdown/Counter: 1 up to `cafe.reservation_rules.max_party_size`)
  - `Date` (Interactive Calendar: Cannot select dates in the past. Greyed out if within `booking_lead_time_hours`).
- **Step 2: Time Selection**
  - *UI Elements:* Grid of time slot buttons (e.g., "18:00", "18:30").
  - *Data Source:* Populated by `useAvailability` (`GET /api/v1/cafes/:cafeId/available-slots`).
  - *Action:* Clicking a time locks the selection in Zustand and opens the Auth/Details Overlay.
- **Step 3: Details & Hold (Auth Overlay)**
  - *UI Elements:* Slide-up sheet or Modal.
  - *Logic:* If no HttpOnly cookie is found, prompt for Phone/Email login.
  - *Action:* Clicking "Proceed to Payment" triggers `useBookTable` (`POST /api/v1/.../reservations`). Generates a `HOLD` status.

2. Checkout & Payment (`/[tenant]/checkout`)

- **Purpose:** Collect the deposit via Razorpay.
- **UI Elements:**
  - Booking Summary Card (Date, Time, Party Size, Cafe Name).
  - Deposit Amount (e.g., ₹100).
  - Countdown Timer (e.g., "Table held for 05:00").
- **Action:** Triggers Razorpay JS SDK using the `razorpay_order_id` returned from the HOLD request.

3. Booking Success (`/[tenant]/success`)

- **Purpose:** Confirmation receipt.
- **UI Elements:**
  - Large Green Checkmark.
  - Reservation ID / QR Code.
  - Status indicator showing `CONFIRMED` .
  - "Add to Calendar" button.

PART 3: The Manager Dashboard (cafe.nextbooq.com/dashboard)

Protected routes requiring JWT and specific RBAC permissions.

1. Host Stand / Live Manifest (`/dashboard`)

- **Purpose:** The primary iPad screen for hosts during service.
- **UI Layout:** Split-screen (List on Left, Floorplan on Right).
- **Header:**
  - Date Picker (Defaults to Today).
  - Shift metrics (Total Covers, Expected, Seated).
- **Left Panel (The Manifest):**
  - List of reservations from `useManifest` (`GET /reservations?date=...`).
  - *Display fields:* Guest Name, Time, Party Size, Table Number, Status Badge.
- **Right Panel (The Floorplan):**
  - Visual representation of tables.
  - *Colors:* Green (Empty), Yellow (Reserved soon), Red (Seated).
- **Action Drawer (Status Update):**
  - Clicking a reservation opens a side-drawer.
  - *Buttons:* [Check In], [Seat Guest], [Complete], [No-Show], [Cancel].
  - *Logic:* Clicking a button triggers `useUpdateStatus` (`PUT .../status` passing the `version` for OCC).

2. Table Inventory Editor (`/dashboard/tables`)

- **Purpose:** Where managers create their physical floor layout.
- **UI Elements:** Data Table listing all active tables, "Add New Table" Button.
- **Table Form (Add/Edit Modal):**
  - `Table Number` (Text Input - e.g., "Window-1", required).
  - `Capacity` (Number Input - > 0, required).
  - `Status` (Toggle/Dropdown - 'active' or 'out_of_service').
  - `Mergeable With` (Multi-select Checkbox). Lists all other table IDs. Allows backend to link tables (e.g., Table 1 can merge with Table 2).
  - `Delete` (Button - sets `is_deleted: true`).

3. Cafe Settings (`/dashboard/settings`)

- **Purpose:** Configure the rules that dictate the availability engine.
- **Form Fields (Mapped to `reservation_rules`):**
  - `Default Turn Time` (Number Input - minutes, e.g., 90).
  - `Maximum Party Size` (Number Input - e.g., 12).
  - `Booking Lead Time` (Number Input - hours, e.g., 24).
  - `Hold Duration` (Number Input - minutes, e.g., 10).
  - *Submit Action:* PUT request to update the Cafe document.
